Country Management System
Giorgi Kharatishvili

Description

The country management system will have 4 features:
1. Storage for the countries
2. Ability to add countries
3. Ability to remove countries
4. Ability to print countries

Structure

We will need the following classes:
1. Country - the country itself (String name, String capitalCity)
2. CMS - country management system (List<country> storage, void addCountry(Country), boolean removeCountry(Country), printStorage())
3. CountryTester - the tester class
